Revolutionise your

Freight Forwarding & Clearing Processes

Dramatically reduced capturing time

Automated document identification and capturing can cut your processing time with as much as 90% whilst increasing accuracy
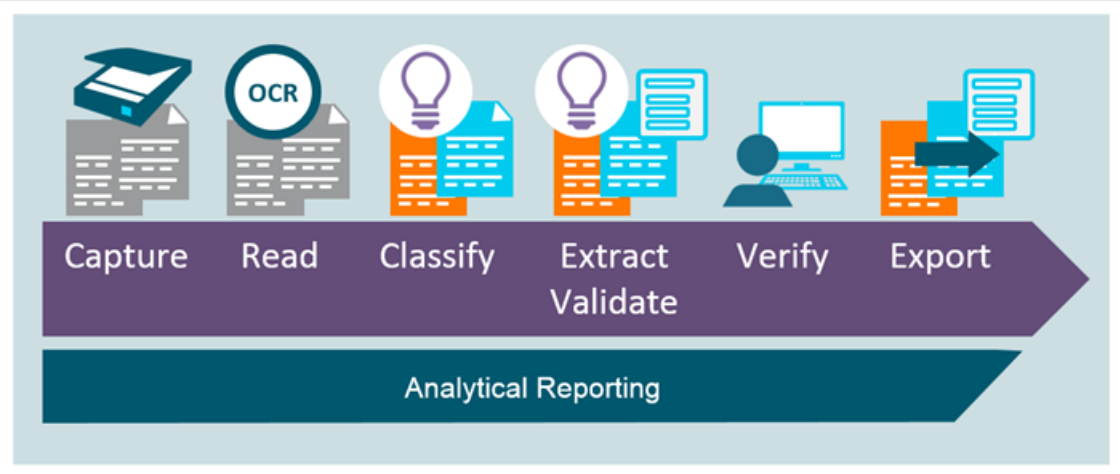

Your data, where you need it

Import your data directly into your ERP, Clearing, Workflow and Reporting systems

kinetix
SOFTWARE SERVICES

Eliminate process bottlenecks, inefficient, manual data entry, lost hours and rising costs.

Automated identification, capturing and matching of Commercial Invoices, Packing Lists, House Bills, Certificates and ANY other information in the pack at **line item level**

Capture — Read — Classify — Extract Validate — Verify — Export

Analytical Reporting

Verify data at the source

Automatically confirm product codes, consignee information in real time directly from your line of business systems and ERP

Compare and match data

Match data between documents such as commercial invoices and packing lists to ensure the information is consistent

SMARTSHIP ERP

IMG 003

Get the best out of your data

Extracted data can be exported into any format to automate, inform and enhance your business processes

IMPORT DATA INTO YOUR ERP

### GENERATE A BILL OF LADING

ADVANCED REPORTING

Manage exceptions and quality control processes through advanced workflow

The consolidated document pack and data is routed through workflow processes to manage exceptions and to ensure quality control and dramatically improve processing time

Freight forwarding for the 21st Century

Transform the time-intensive task of manually processing forwarding documents into a fast and effective automated routine. Industry leading data extraction software pulls key information directly from paper and electronic documents faster and more accurately than other technologies, without requiring templates, anchors, keywords or zones.

Embrace a complete document processing system that combines automatic document classification, extraction, and validation, as well as archiving and uploading of data into many enterprise resource planning (ERP) systems.

This advanced, intelligent capture technology enhances the accuracy and speed of any process that requires more than the standard character and form recognition of traditional OCR—all in a comprehensive package that delivers results from day one.

Reduces overall cost of data acquisition by drastically reducing manual data entry

Automatically index documents by leveraging captured data

Ensure data is valid and accurate to smooth follow-on processes

Improves document indexing accuracy and allows users to focus on exception processing when necessary

Maximize processing and improve input cycle times by automating data capture
